

Fuel Gauge

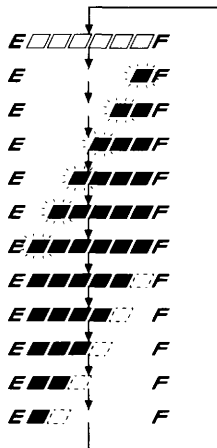

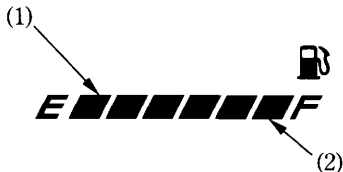

The fuel gauge liquid crystal display (1) shows the approximate fuel supply available in a graduated display. When the segment F (2) goes on, the fuel tank capacity including reserve is:

21.0 ℓ (5.55 US gal , 4.62 Imp gal)

When the display flashes as shown in the illustration, fuel will be low and you should refill the tank as soon as possible.

The amount of fuel left in the tank with the vehicle set upright is approximately:

4.0 ℓ (1.06 US gal , 0.88 Imp gal)
